

SBH

SEAMLESS BALLISTIC Helmet (SBH)

SHELL

The Seamless Ballistic® Helmet Shell is manufactured in the United States from Ultra High Molecular Weight Polyethylene (UHMWPE) Composites utilizing Proprietary Seamless Ballistic Construction, raising the level of protection while conforming to the U.S. Military weight requirements of the Advanced Combat Helmet. It is built with similar dimensions to the U.S. Military ACH style helmet, with no integrated visor. The Shell trim contour has an extra wide eye port opening for maximum peripheral vision to comfortably accommodate all known gas masks and goggles. The neck trim line provides maximum protection while allowing uninhibited movement when wearing most ballistic vests with collars.

SIZES

Four helmet shell sizes ranging from small through X-Large are available for personal helmet fit.

The entire helmet is protected with a scratch resistant non reflective flat paint that includes texturing.

RETENTION SYSTEM

The SBH retention system is the OpsCore® Head-Loc® H-Nape Chinstrap. This system offers the user improved helmet stability over existing retention systems, particularly when wearing helmet mounted accessories. Patented tabs provide one-handed adjustment while wearing the helmet. Padded leather chin cup and nape pad are included for support and protection.

PAD SYSTEM

The SBH pad system is the Team Wendy Zorbium® Action Pad (ZAP™) authorized for all US Ground Forces Combat helmets. The set includes 7 pads comprising 1 circular crown pad, 2 trapezoid pads, 4 oblong pads, as well as an illustrated instruction manual.

STANDARDS

With more than 50% V50 improvement over ACH, the SBH protects against select rifle rounds and Incorporates Seamless Ballistic® technology which yields maximum protection. A single pre-drilled hole for the NVG mount is included.

ACCESSORY OPTIONS

- NVG Shroud
- Color: Coyote Tan; OD Green and Black options available for high volume orders
